06-04 Installation Flowchart

This document outlines the logical flow for installing and activating the BrainFrame system — whether for individual or team use.

It is designed to be:

- Lightweight

- Modular

- Adaptable to platform or preference

🔁 **Flowchart Overview**

[Start]

 ↓

[Choose Use Type]

 → (Personal Use) → [Core Module Selection] → [AI Setup] → [Template Import] → [Reflection Test] → [Ready]

 → (Team Use)　 → [Shared Language Setup] → [Roles + SelfFrames] → [AI Calibration] → [Shared Templates] → [Team Pilot] → [Ready]

✳️ **Key Flow Stages**

1. **Choose Use Type**

   o Solo (personal system)

   o Team (multi-user configuration)

2. **Module Setup**

   o Install/Activate core modules (Shadow Planner, Prompt Library, etc.)

   o Link to preferred tools if desired (e.g. Notion, Obsidian)

3. **AI Interaction Configuration**

   o Select tone, interaction style, and AI mode (see 02-07-01)

4. **Template Deployment**

   o Import Modular Templates

- Set reflection cadence and feedback prompts

5. **System Activation**

   - Run first test flow: Morning Clarity Prompt → Daily Shadow Log → Evening Reflection

   - Adjust as needed

6. **Team-Specific (if applicable)**

   - Establish shared definitions

   - Align on tone, cadence, and visibility

This is not software installation. It's **mental architecture activation**.

Follow the flow, then make it yours.
